Open Research
Computation

The *Open Research Computation* thematic series publishes peer reviewed articles that describe the development, capacities, and uses of software designed for use by researchers. Submissions relating to software for use in any area of research are welcome as are articles dealing with algorithms, useful code snippets, as well as large applications or web services, and libraries. The *Open Research Computation* thematic series requires for software source code to be made available under an Open Source Initiative compliant license, and assesses the quality of documentation and testing of the software. In addition to articles describing software the thematic series also welcomes submissions that review or describe developments relating to software based tools for research. These include, but are not limited to, reviews or proposals for standards, discussion of best practice in research software development, educational and support resources and tools for researchers that develop or use software based tools.

Software review Open Access
Inmembrane, a bioinformatic workflow for annotation of bacterial cell-surface proteomes
Andrew J Perry, Bosco K Ho
Source Code for Biology and Medicine 2013, **8**:9 (19 March 2013)
Abstract | Full text | PDF | ePUB | PubMed

Software review Open Access Highly accessed
Layout-aware text extraction from full-text PDF of scientific articles
Cartic Ramakrishnan, Abhishek Patnia, Eduard Hovy, Gully APC Burns
Source Code for Biology and Medicine 2012, **7**:7 (28 May 2012)
Abstract | Full text | PDF | PubMed

Software review Open Access
Bio-samtools: Ruby bindings for SAMtools, a library for accessing BAM files containing high-throughput sequence alignments
Ricardo H Ramirez-Gonzalez, Raoul Bonnal, Mario Caccamo, Daniel MacLean
Source Code for Biology and Medicine 2012, **7**:6 (28 May 2012)
Abstract | Full text | PDF | PubMed | Cited on BioMed Central

Software review Open Access
Automatic Fortran to C++ conversion with FABLE
Ralf W Grosse-Kunstleve, Thomas C Terwilliger, Nicholas K Sauter, Paul D Adams
Source Code for Biology and Medicine 2012, **7**:5 (28 May 2012)
Abstract | Full text | PDF | PubMed

Software review Open Access
Scaffolder - software for manual genome scaffolding
Michael D Barton, Hazel A Barton
Source Code for Biology and Medicine 2012, **7**:4 (28 May 2012)
Abstract | Full text | PDF | PubMed

Commentary Open Access Highly accessed
How Not to Be a Bioinformatician
Manuel Corpas, Segun Fatumo, Reinhard Schneider
Source Code for Biology and Medicine 2012, **7**:3 (28 May 2012)
Abstract | Full text | PDF | PubMed | 1 comment
